Summer is coming! Take the time now to evaluate your painting needs. Custom colors and quality work will make your house look new again. A new paint job is the most cost effective way to protect, beautify and increase the value of your home.

We take great pride in our work, and value our customers. Attention to detail is our standard. Professional application techniques and top quality materials are used for all surfaces. Be pro-active, maintaining your home will prevent more costly repairs later. Protect and beautify your home for years to come!

Our painting process includes:

- **Washing**- All surfaces are hand cleaned, scrubbed, and power-washed, then allowed to completely dry.
- **Project and Surface Preparation** – Much care is taken to protect all surrounding areas to ensure a clean, safe environment. We want to paint your house, not your roof, patio, plants or vehicles. All surfaces are prepped accordingly, sanded, scrapped, primer and caulking performed as needed. Loose boards will be secured or replaced if needed.
- **Finish Coat Application** – All surfaces will have a minimum of two coatings, using brush, roller and spray applications that optimize the best material coverage. Eco-friendly and lead safe paints.
- **Project Completion** – Our goal is to paint your home in the most efficient way possible, and minimize interruptions to your daily schedule. A typical home start to finish takes around 7 days. Clean up is performed daily. All materials and equipment are properly handled and removed upon completion of the project.
- **Warranty** – Transferable 1 year written warranty
